

Baby Birth and Beyond

Baby Birth and Beyond

- Choose Your Fluid
- Lactated Ringers - Best for dehydration, but also clinically shown as effective for hemorrhage as regular saline. This is the preferred solution because of its ability to match the mother's blood electrolyte balance and neutralizes acidosis. This is the solution of choice for most midwifery related applications
- Saline - Best for direct volume replacement with hypovolemic shock.
- Lactated Ringer w/ 5% Dextrose - This may be used for hyperemesis. Useful for adding calories & sugar for exhaustion postpartum, but should NOT be used in labor due to risk of maternal and fetal hyperglycemia among other risks. Should NOT be used for blood loss or shock due to risk of blood electrolyte imbalance, tissue necrosis, and interstitial edema in the organs which could result in further organ failure.

Lactated Ringers 1000ml

\$6.00

Lactated Ringers, 1000 mL [\[Product Details...\]](#)

Lactated Ringers 500ml

\$4.00

Currently low stock due to national shortage. Lactated Ringers, 500 ml [\[Product Details...\]](#)

NaCl 0.9%, 100ml
